Marie Curie European PhD Winter School on the Human Dimensions of Global Environmental Change 2009

Introduction

The Winter School consists of 6 days of intensive lectures and seminars by our international faculty – including a two-day PhD Master Class – followed by three days participation in the 2009 Amsterdam Conference on the Human Dimensions of Global Environmental Change 'Earth System Governance: People, Places and the Planet'. The Marie Curie Winter School on the Human Dimensions of Global Environmental Change aims to help students to better understand the causes of global change in an integrated manner and at the same time to develop options for the governance of a transition to more sustainable development paths at the national and global levels. It brings together insights from the modeling, integrated assessment, and sustainability science communities and from the social science, governance-oriented research communities. This year's focus is on the challenge of adaptive governance.
